AP Computer Science Boot Camp
Assignment 1 - Your Hello World Program

Due Date
Wed 6pm, July 26, 2017

Directions

In this assignment, you should build and create a new Java program in your project folder. This program should do very similar things as the first Hello World program we wrote in the class.

You program should have a main method to run, and it uses Java print statement to output information to your screen/console.

You can choose to print anything you like, but the print result should contain both String and numerical computations.

In addition, you should put some comments on your program so that it explains the goal of the program.

Directions

Please email your Java file to my email: yu.sun.cs@gmail.com
